### ABOUT SEMINAR

The seminar titled "From Growth to Greatness: India's Economic Journey to 2047" focuses on India's potential to become a global economic leader by the year 2047, marking the 100th anniversary of its independence. It aims to explore the strategies, opportunities, and challenges that will shape India's economic future. Key areas of discussion include the role of innovation and technology in driving economic growth, such as advancements in artificial intelligence, automation, and renewable energy. The seminar highlights the importance of infrastructure development, both physical and digital, to support rapid urbanization and create a more interconnected economy. Additionally, the significance of education, skill development, and a robust workforce to match global demands is emphasized. The seminar also touches on the need for sustainable and inclusive growth, addressing the economic disparities between urban and rural regions. It stresses the importance of creating policies that promote environmental sustainability while ensuring that the benefits of growth are shared equitably across all segments of society. In the broader context, the seminar considers India's role in global trade, its emerging influence in international supply chains, and the potential to become a key player in global markets. It highlights how fostering a business-friendly environment, improving governance, and investing in human capital are essential for transforming India into an advanced economy by 2047.

### About DR. S. Radhakrishnan Teachers' Training College

The main objective of the B.Ed. and D.El.Ed., course is not only to prepare effective teachers who can deal with the changing educational practices but also to groom and make the teachers training well aware of the cultural and academic developments occurring all around. B.Ed., course enables prospective teachers to comprehend the nature and philosophy of teacher's education at the secondary level. This program also provides opportunities to learners in acquiring competencies relevant to pedagogy, curriculum development, and its transaction as well as evaluation. It fosters creative thinking among teachers training and utilizes community resources such as education, teaching methodologies, linguistic skills, reasoning skills, and use of modern techniques.

Dr. SRKTTC has a well-established corporate Resource center to cater to the needs of placement and counseling students for their future careers. It has a team of highly experienced persons and corporate concerned to facilitate and guide the students for the selection in Schools/ Resource.

### About TURTLE Foundation for Research and Education Trust

TURTLE Foundation for Research and Education Trust refers to the confidence that individuals, institutions, and the public place in the integrity, reliability, and value of research processes and outcomes. In a rapidly evolving world where science and evidence-based decision-making shape policies, innovation, and societal development, trust in research is essential for progress. Trust in research is built on principles such as transparency, accountability, reproducibility, and ethical conduct. Researchers must follow rigorous methodologies, disclose potential conflicts of interest, and communicate findings honestly to maintain public and institutional trust. When these standards are upheld, the public is more likely to accept scientific recommendations, support funding for research, and engage in collaborative innovation. However, trust can be fragile. Cases of data manipulation, unethical experimentation, or biased funding sources can undermine public confidence. Additionally, the spread of misinformation, especially through social media, challenges the authority of scientific evidence. To strengthen research trust, institutions are increasingly emphasizing open science practices, peer review, community involvement, and responsible communication. This includes making data and methodologies accessible, promoting interdisciplinary collaboration, and ensuring diverse representation in research agendas. Ultimately, trust in research is not just about believing in Science, Commerce & Humanities—it's about creating a culture of integrity, transparency, and mutual respect between researchers and society. Without it, the impact and legitimacy of research risk being diminished, even when the Science, Commerce & Humanities itself is sound.
